

STRUCTURE AND EQUIPMENT

Fact sheet No:5b

Ease of Cleaning:

Equipment which is designed for the food industry is designed for thorough cleaning and disinfection. It will withstand industrial grade cleaning materials and usually is designed to be as easy to clean as possible without dirt traps. The picture below shows a domestic grade blender which is poorly designed with regard to cleaning.

Equipment with moving parts must be lubricated with edible food grade oils. Using non-edible oils can contaminate the food and cause serious illness as industrial oils are toxic.
